A LUNATIO'S PECULIAN PRANK.

Rown, July 12.—A sergeant of the infantry garrison at Minza attempted to-day to hill himself with a rifle. Among his effects was found a letter addressed to the King, stating that he had been deputed by a secret society to hill the King, but preferred to die himself, and commending his mother to the King's care. When taken before a magistrate the sergeant adhered to the statements in his letter, but refused to divulge the name of the society. King Humbert, on reading the letter, said that the man must be a lunatic who wished to create a sensation by committing suieide.

was satisfactory to himself, for, although a great amount of work has been done and its being done by erchardists and owners of trees, the fact remains patent to all that the positierons scale bug has increased largely during the warm washer of the last month or air weeks; and, were it not for the fact that owners of trees have, to a great extent, become impressed with the necessity of doing something to beep them down, the consequences would be alarming indeed. The great desideration is some remedy that will more effectually desiroy, not only the bug, but the eggs. This remedy the Hortically desiroy, not only the bust in eggs. This remedy the Hortically desiroy, not only the past month at the Wolfskill orchard. The result cannot yet be determined, but it is suppopined that something good for buge may be evolved. I would respectfully state it as my opinion that more help is needed, and that more vigorous measures should be adopted at once, so that the whole city may be aroused, if possible, to the need of a general clean-up. This can be done to a great extent by properly organized effort by the Inspectore, provided there are enough of them. On the other hand, I fear that nothing more can be done than has been done, while we are so constituted."

Inspector J. R. Badham also reported what he had been doing, and his belief thal the scale must be fiscely and tirelessly fought, or it will multiply beyond all possibility of cheek.

121 per cent. Our terms are cash.

A. Hamburger & Sons,

BEONCHITIS,

Acute Bronchitis is an inflamm stion of the muceus membrane of the bronchial tubes, and is one of the most common of the pulmonary diseases. It is a dangereau disease, as it prevents the oxygenation of the blood, and in many cases, particularly after it passes into the chronic stage, the substance of the lungs becomes seriously involved, giving rise to what is very property called Bronchial Consumption. In the soute form there is sense of tightness or pressure across the cheet, with considerable wheezing, severe cough and expectoration. This is at first a white glairy mucous, which after a time becomes purulent. The patient in some cases is obliged to sit up in bed, the oppression across the cheet is so great; the akin is clammy and prostration rapidly sets in, and in fatal cases there will be muttering delirium, come and death.
